

## **CARIBOU ENGLISH HOW TO TALK ABOUT SCHOOL SUBJECTS. 2 MINUTE ENGLISH. TRANSCRIPT**

When I was in high school, I liked studying history because I thought it was enjoyable and interesting.

I did not like studying math because I thought it was difficult and boring. Now that I am older, I understand that both math and history are important for different reasons, though.

In my opinion, the most important subject is geography, because I think that knowing about the world is a practical and important skill. If we do not know geography, it makes it very difficult to understand the world around us.

I think that the least important subject is physical education. I think exercise is very important and valuable, but I think that most children play sports outside of school. This means that studying physical education at school may be less important.

Everyone should study many different subjects, because it is important to be well rounded individuals.
