

IELTS ENGLISH PODCAST. AI. TRANSCRIPT

Part 1. Are You Interested In Artificial Intelligence?

Yes, I am absolutely. I'm really interested in the development of artificial intelligence. I try to use it as much as possible, with different chatbots, I use ChatGPT. I also like generate... generating images, so I use Dall-E 3. I don't know if you're familiar with that, but, I really love experimenting with all these different AIs.

Part 1. What Are Some Common Uses Of AI In Everyday Life?

I think so, as I said, we definitely use chatbots and we're seeing more and more self-driving cars. I think we're going to see that especially more over the next few years. So, also you see AI-generated music, pictures nowadays, videos. So it's really, becoming widespread throughout society.

Part 2. Describe A Job That You Think Could Be Replaced By Artificial Intelligence In The Future.

I'd like to tell you about, life coaches and business coaches. About a year and a half ago, I started using ChatGPT, and I started experimenting with different prompts that you can use and I was just really impressed by how intelligent it was. As I got better at delivering prompts to the AI, I found the answers improved as well and one of the things I discovered was that it was very good with a business coaching. I didn't use it for life coaching, but I certainly answered, asked it some very deep questions related to business, and I was really impressed with the answers.

So let me tell you a little more about my experience with AI as a business coach. I asked it a number of questions, strategy-wise, about my business and just got a very thorough response. I dug even deeper. I asked it further questions. I asked it to develop its answers and overall, yeah, I was really impressed and kind of surprised. It gave me some ideas that I hadn't thought of before of course, another thing to think about with this is that later we will have AGI, Artificial General Intelligence, which will be even more smart and think like a human, so I can't imagine what answers will get then. So for me personally, ChatGPT has become quite an important part of my life. I use it for idea generation and structuring things and, getting information. It's a good source of information. In the future, I hope to continue using it even more. I don't know how good it's going to become. I think some people fear that.

VOCABULARY

chatbots (noun) - Computers that can talk to people like humans, answering questions and having conversations.

coaching (noun) - Helping or teaching someone to improve at something, like a sport or a skill.

dug even deeper (verb) - To search or look into something more carefully and for a longer time.

experimenting (verb) - Trying new things to see what happens, like testing an idea or a plan.

familiar (adjective) - Something you know well or have seen before, so it feels comfortable.

generate (verb) - To create something, like making or producing an idea, sound, or picture.

impressed (adjective) - Feeling amazed or very happy with something because it's really good or interesting.

prompts (noun) - Words or questions that make someone think or start talking about something.

sentient (adjective) - Able to feel or experience things, like being aware of what's happening around you.

structure (noun) - The way something is arranged or built, like the parts of a building or a plan.

widespread (adjective) - Something that happens or is found in many places, not just one spot.
